**AGING**

## CELLULAR AGING AND SENESCENCE

Water, proteins and lipids are the three key components of the skin's structure, which tend to be depleted over time, leading to loss of tone, a less defined face and more visible wrinkles.

In addition, in mature skin, cells become senescent, so they lose the ability to regenerate but instead contaminate adjacent cells. This initiates a chain process and a visible worsening of aging.

## **SUBLIME SKIN**

### **THE NATURAL FILLER SOLUTION**

Innovative [ comfort zone ] scientific research has led to the creation of the new Sublime Skin, a clean line that combines great effectiveness with the most rigorous respect for sustainability criteria with high-performance formulas that counteract cellular senescence and correct the signs of aging for a more youthful, toned and replumped appearance.
